Dear City Council Members,

When I found out about San Bruno's senior center and began to take advantage of its programs, lunches were meatless on Fridays. A couple of years ago that changed, and since then lunches have rarely been meatless. Recently, a UN climate-change report stated that climate change is widespread, rapid, and intensifying. It recommended that people consume less meat, and that politics create appropriate incentives to that effect ([Eat less meat: UN climate-change report calls for change to human diet](#)). Many sources have recommended reducing meat consumption as one of the most effective ways a person can combat climate change ([7 Instant Ways To Reduce Your Carbon Footprint](#)). The senior center is again looking at potential changes to their lunch program. I hope San Bruno will support the fight against climate change by reinstating meatless Friday (or Monday, or any other day) lunches at the senior center. I hope San Bruno will also look at the potential to reduce meat consumption in any other meal programs it runs or subsidizes. Thank you.

Marsha Glassner

Eat less meat: UN climate-change report calls for change to human diet

The report on global land use and agriculture comes amid accelerating deforestation in the Amazon.
